

Prompt Engineering Assignment

Prompts, Outputs and Observations

Name: Potdar Chinmay Sandip

1. Translation Prompt

Prompt:

hello -> bonjour translate to goodbye

Output:

Goodbye → Au revoir

Observation:

The LLM understood the translation pattern and provided the French translation for “goodbye.”

2. Translation Prompt with Example

Prompt:

thanks merci translate to goodbye

Output:

Goodbye → Au revoir

Observation:

The LLM identified that the requested word was “goodbye” and translated it into French instead of translating “thanks.”

3. Water Cycle – Two Bullet Points

Prompt:

Summarise the water cycle in 2 bullet points formal tone

Output:

- Water evaporates due to the Sun's heat, condenses into clouds, and forms precipitation.
- Precipitated water collects in rivers, lakes, oceans, and groundwater, continuing the cycle.

Observation:

The LLM followed the requested two-bullet format and used a formal writing style.

4. Water Cycle Summary with Image Link Request

Prompt:

Summarise the water cycle in formal tone

Output:

The water cycle is the continuous movement of water between the Earth's surface and the atmosphere. Water evaporates, condenses to form clouds, and returns to Earth as precipitation before collecting in water bodies and groundwater.

Prompt continuation:

Also, it provide me a link, in which only by clicking it will generate the images of water cycle

Observation:

The LLM provided a short formal summary without restricting the response to bullet points.

5. User Details Extraction

Prompt:

extract user details from john is 25 years old. Return this information back to me immediately

Output:

- Name: John
- Age: 25 years old

Observation:

The LLM extracted the specific details directly stated in the sentence and presented them as separate points.

6. JSON Prompt

Prompt:

ask json with a required field, then omit it immediately

Output:

Required field:

```
{  
  "name": "John"  
}
```

Field omitted:

```
{}
```

Observation:

The LLM showed a JSON object containing the field first and then demonstrated what the JSON looks like when that field is removed.

7. Unclear Input

Prompt:

21.23

Output:

The LLM asked what operation should be performed on the number, such as calculation, conversion, or rounding.

Observation:

The LLM did not assume what should be done with an ambiguous numerical input and asked for clarification.

8. Date and Diwali

Prompt:

“what’s todays date and how many days until diwali?”

Output:

Today is Sunday, August 23, 2026.
Diwali 2026: Sunday, November 8, 2026.
That means there are 77 days until Diwali!

Observation:

The LLM provided the current date, Diwali date, and calculated the number of days until Diwali.

9. Weather in Nashik

Prompt:

what’s the weatehr in nashik?

Output:

Right now in Nashik, it’s around 28°C with rain. The weather is breezy, with more showers possible this afternoon.

Observation:

The LLM provided the weather information for Nashik, including temperature and rain conditions.

10. Python Weather Function

Prompt:

write a python function `get_weather(city)` and show how it would call it for nashik

Output:

```
def get_weather(city):  
    print("Weather information for", city)  
  
get_weather("Nashik")
```

Output:

```
Weather information for Nashik
```

Observation:

The LLM created a Python function with a city parameter and showed how to call it using “Nashik”.

11. Python Function with Nashik

Prompt:

write a python function `get_weather(nashik)` and show how it would call it for nashik

Output:

If you specifically want `get_weather(nashik)`, remember that Nashik should be a string, so put it in quotes:

```
def get_weather(city):  
    print("Getting weather for", city)  
  
get_weather("Nashik")
```

Output:

```
Getting weather for Nashik
```

Observation:

The LLM corrected the use of nashik by explaining that the city name should be written as a string and showed the correct function call.

12. One-Shot Prompting

Prompt:

one shot prompting

Output:

One-shot prompting means giving the AI one example of the task you want, so it can understand the pattern and produce a similar answer.

Example:

Convert the following sentence into a question.

Example:

Input: "I like Python."

Output: "Do I like Python?"

Now convert: "I like machine learning."

Expected output:

"Do I like machine learning?"

Observation:

The LLM explained one-shot prompting and provided one example to demonstrate how the pattern works.

13. Image Example of One-Shot Prompting

Prompt:

#i give the output of the first prompt to model to check is that correct or not
is this correct

Output:

Yes, your one-shot prompting example is correct.

- Example: Hello → Bonjour
- New input: GoodBye

- Expected output: Goodbye → Au revoir

One small correction: write “Goodbye” instead of “GoodBye” for normal English spelling.

Observation:

The LLM confirmed the example was correct and pointed out the spelling difference between GoodBye and Goodbye.

14. Observation of One-Shot Prompting

Prompt:

give me observation of one shott

Output:

One-shot prompting provides the AI model with one example of the desired task. The model observes the given example, understands the pattern, and applies the same pattern to the new input.

Observation:

The LLM gave a short observation explaining that one example helps the model identify and apply a pattern.

15. Few-Shot Prompting

Prompt:

few shot

Output:

Few-shot prompting means giving the AI model multiple examples of a task so that it can understand the pattern and apply it to a new input.

Example:

Input:
Hello -> Bonjour
Good morning -> Bonjour
Thank you -> Merci

Now translate:
Goodbye

Output:
Goodbye -> Au revoir

Observation:

The LLM explained few-shot prompting and used multiple translation examples to show how the pattern is applied.

16. Prompts and Observations

Prompt:

Write all the above prompts one by one and give me obvs with them that how the prompts the llm model understand

Output:

The LLM provided zero-shot, one-shot, and few-shot prompting examples, with an output and observation for each one. It also included a comparison showing the number of examples used in each prompting method.

Observation:

The LLM organized the three prompting types separately and explained how examples help the LLM identify the expected pattern.

17. Prompts and Observations with Outputs

Prompt:

Write all the above prompts one by one and give me obvs with them that how the i understand from the outputs of u give to me

Output:

The LLM provided the prompts, outputs, and observations separately for zero-shot, one-shot, and few-shot prompting. It explained what could be understood from each output.

Observation:

The LLM presented each prompting method separately and described how the output reflected the instruction and examples given in the prompt.

18. Prompt Engineering Assignment Format

Prompt:

For all the prompts in this chat, create the following format for each one:

Prompt: Write the exact prompt I gave.

Output: Write the answer/output that the LLM gave.

Observation: Briefly explain what the LLM did or how it responded to the prompt.

Output:

The response is the formatted list above, with each prompt separated into Prompt, Output, and Observation sections.

Observation:

The LLM followed the requested structure and presented the prompts individually with separate outputs and short observations.
